|  Department of Veterans Affairs | <b>Consent For Clinical Treatment/Procedure</b> |
| <b>A. IDENTIFICATION</b>                                                                                         |                                                 |

**1. Patient name, Social Security Number, and Date of Birth:**

ZZAAVAMC, JOHN TESTMAN  
001-23-4567  
JAN 02, 1955

**2. Decision-making capacity:**

The patient HAS decision-making capacity.

**3. Name of the treatment(s)/procedure(s):**

PRICK AND SCRATCH TEST

**4. Part of the body on which the treatment/procedure will be performed:** (Correct site includes the correct side [i.e., left or right] and the precise anatomical part, such as a specific finger. DO NOT ABBREVIATE.)

- volar forearm

**5. Practitioner obtaining consent:**

Granata, Joseph A (PHARMACIST)

**6. Supervising practitioner:** (if applicable)

**7. Additional practitioner(s) performing or supervising the treatment/procedure:** (if not listed above)

|                                                     |
|-----------------------------------------------------|
| <b>B. INFORMATION ABOUT THE TREATMENT/PROCEDURE</b> |
|-----------------------------------------------------|

**8. Reason for treatment/procedure (diagnosis, condition, or indication):**

Allergy-related symptoms.

**9. Brief description of the treatment/procedure:**

The goal of the test is to determine the probability that the person's symptoms are due to one or more of the allergens tested. Various allergens can be used for testing, including foods, outdoor allergens such as pollen or grass, indoor allergens such as mold or animal dander, and some drug allergies.

Prior to testing, the patient needs to abstain from using any type of antihistamine

medication. The number of days that the antihistamine needs to be stopped before testing can range from one to seven days, depending on the particular antihistamine used. The patient should check with the allergist for specific guidelines.

A small amount of liquid containing the allergic substance is applied to the skin, and then the skin is pricked or scratched with a pointed instrument. No anesthesia is needed for this procedure.

After waiting for twenty minutes, the test locations are checked for localized redness and swelling. A positive skin test will indicate that antibodies (proteins produced in the blood) called IgE are present. The positive test must correlate with the patient's history to determine if the person is actually allergic to the substance tested. If there is a good correlation, the skin test results strongly suggest an allergy to the substance.

**10. Potential benefits of the treatment/procedure:**

This test helps a physician determine if an individual is allergic to the substance(s) used in the test. Once the physician determines the patient's allergies, an appropriate treatment plan can be started.

**11. Known risks and side effects of the treatment/procedure:** (Include potential problems related to the recuperation.)

Known risks of this treatment include, but are not limited to:

- Swelling, redness, or pain at the test site(s).
- Difficulty breathing, generalized itchy skin rash, and/or nasal stuffiness.
- Anaphylactic shock and/or death.

**12. Alternatives to the treatment/procedure:**

Alternatives include a blood test called a RAST test or ELISA test. Observation is another possible alternative.

**13. Anesthesia / Moderate Sedation:**

No, neither anesthesia nor moderate sedation will be used in this treatment/procedure.

**14. Blood products:**

It is not expected that blood products will be used in this treatment/procedure.

**15. Additional information**

After my surgery, I ask that the medical staff dispose of any of my tissues or body parts that were removed during the treatments/procedures, as long as my doctor or dentist does not think that further pathological examination is needed.

I understand that the practice of medicine, surgery and dentistry is not an exact science and acknowledge that no guarantee can be made concerning the results of the procedures performed.

It has been explained to me that sometimes during a procedure, it can be discovered

that an additional procedure is needed immediatley. If I need this procedure, I permit the doctors to proceed.

I consent to the photographing, filming, or recording of the procedure, including portions of my body, for medical, scientific, research or educational purposes. When used for any purposes other than the medical record, my identity will not be revealed by the pictures or accompanying text.

## **16. Comments**

### C. SIGNATURES

#### **Practitioner obtaining consent:**

- All relevant aspects of the treatment and its alternatives (including no treatment) have been discussed with the patient (or surrogate) in language that s/he could understand. This discussion included the nature, indications, benefits, risks, side effects, and likelihood of success of each alternative.
- The patient (or surrogate) demonstrated comprehension of the discussion.
- I have given the patient (or surrogate) an opportunity to ask questions.
- I did not use threats, inducements, misleading information, or make any attempt to coerce the patient/surrogate to consent to this treatment.
- I have offered the patient (or surrogate) the opportunity to review a printed copy of the consent form.

Granata, Joseph A (PHARMACIST)

#### **Patient or surrogate:**

##### PATIENT OR SURROGATE:

By signing below, I attest to the following:

- Someone has explained this treatment/procedure and what it is for.
- Someone has explained how this treatment/procedure could help me, and things that could go wrong.
- Someone has told me about other treatments or procedures that might be done instead, and what would happen if I have no treatment/procedure.
- Someone has answered all my questions.
- I know that I may refuse or change my mind about having this treatment/procedure. If I do refuse or change my mind, I will not lose my health care or any other VA benefits.
- I have been offered the opportunity to read the consent form.
- I choose to have this treatment/procedure.
